

## Assignment (5%)

I have shown you how to create a BMI calculator using ASP.NET technique in the preceding lecture and uploaded the source code of BMI calculator with internal CSS code for style.

**Your mission** is to create an application (BMI is excluded) using ASP.NET technique whose complexity is equivalent to or higher than BMI calculator and style the web page using appropriate techniques.

You are required to **submit a hardcopy** which consists of the following sections:

1. **Cover page**, includes the title of your application, your name, student ID.
2. **Introduction**, briefly introduces your application and background.
3. **Solution**, that is, the description of your idea, your design, and techniques you will use.
4. **Code**, includes HTML portion and VB source code portion
5. **Final result**, that is, screen display.
